

PRODUCT OVERVIEW

OpenText Core for Federated Compliance

Provide consistent policy compliance across content repositories

 **Visualizes** centralized compliance for the enterprise

 **Enables** multi-repository records control

 **Validates** records compliance

As the volume and information and complexity of regulatory and privacy requirements grows, so does the difficulty in managing a compliance program. Content sprawl is an ongoing struggle in the modern enterprise and manually coordinating a defensible compliance program across repositories is next to impossible. Attempts to solve these problems largely fail to effectively scale or manage risk.

OpenText™ Core for Federated Compliance delivers cross-repository visibility and policy control to deliver transparency and defensibility for organizational information governance processes and reporting. The modern enterprise must grapple with many different repositories, both in the cloud and on-premises. As a hybrid-solution with a secure, cloud-based management console, Core for Federated Compliance empowers records administrators and risk managers to develop, deploy and track an organizational retention policy, perform legal hold collection and report on compliance across multiple repositories.

As a recognized leader in content services platforms, OpenText is committed to providing advanced information governance solutions. With the OpenText™ OT2 platform, OpenText extends this commitment to cloud-based content services, with Core for Federated Compliance as the keystone policy assurance for an information advantage in the enterprise.

Core for Federated Compliance offers a unique design that provides centralized oversight and control, while maintaining local security and jurisdictional control of records and metadata. The architecture both extends the scalability of the platform and respects key data sovereignty regulations, necessary to reduce risk and comply with everchanging retention requirements and difficult legal hold issues.

- OpenText Professional Services
- OpenText™ Global Partner Program

Visualizes centralized compliance for the enterprise

Reports and dashboards provide data reporting across multiple systems for a functional view of compliance status across the enterprise.

Enables multi-repository records control

Attain control of records extending across multiple repositories and preserve critical or sensitive content to ensure compliance.

Status	Name	Description	Retention	System

Validates records compliance

Validate compliance of content classifications to assure continued compliance with regulatory requirements and evolving data privacy requirements.

The federated compliance search finds content that may be mishandled by your existing policies and requires remediation.

Search metadata, tag, and take action on content from any managed repository

Feature	Description
Define retention policies	Define retention policies against an organizational information management plan
Map retention policies	Map retention policies in various connected repositories
Smart UI dashboards	Provide an overview of retention compliance across all repositories
Validate	Ensure content is compliant with its retention plan
Content on hold	Manage and report on content that is on hold
