

Move the needle with OpenText Customer Experience Insights

Track, consolidate and analyze interactions to better understand customers and their journey

87% of shoppers begin their hunt on a digital channel—up from 71% last year¹

17% of consumers believe that brands care beyond the point of purchase²

47% will abandon a brand when not treated as a recognized customer³

29% of B2B customers are fully engaged and 71% are at risk of leaving for a competitor⁴

Marketing and product teams have become the tip of the spear to drive digital transformation. The enormous amount of content marketing organizations generate is designed to move the needle and get customers to interact with brands or products. When tracked, consolidated and analyzed, those interactions provide insights to better understand the customer and their journey.

Organizations that prioritize customer experience are using journey analytics to become insights-driven, responsive and connected. Journey analytics takes both quantitative and qualitative customer data to better understand and predict behavior.

Marketing and product teams are accountable for improving customer experience to ensure greater customer success, satisfaction and retention by creating and redefining digital business models that optimize business operations at scale.

OpenText™ Core Experience Insights collects valuable data from customer interactions across channels, devices and applications, to map the customer journey and provide analysis and insight on customer behavior. This allows organizations to see how marketing efforts are performing throughout the entire customer lifecycle, from engagement and acquisition to retention and customer satisfaction.
